

Python List Assignment

1.

```
arr = [1,2,3,4]
product = 1
for num in arr:
    product = product * num
print(product)
```

2.

```
arr = [1,2,3,4,5]
total = 0
for num in arr:
    total = total + num
print(total)
```

3.

```
arr = [3,3,3,1,2]
k = 3
count = 0
for num in arr:
    if num == k:
        count += 1
print(count)
```

4.

```
arr = [1,2,3,4,5,6,7]
even_sum = 0
odd_sum = 0
for num in arr:
    if num % 2 == 0:
        even_sum = even_sum + num
    else:
        odd_sum = odd_sum + num
print(even_sum, odd_sum)
```

5.

```
arr = [1,2,3,4,5]
m = 3
found = False
for num in arr:
    if m == num:
        found = True
if found:
```

```
print(Yes)
else:
print(no)
```

6.

```
arr = [11,23,3,45,72,68]
result = []
for age in arr:
if age > 18:
result.append(age)
print(*result)
```

7.

```
arr = [1,2,3,4,5]
new_arr = []
for num in arr:
new_arr.append(num + 1)
print(*new_arr)
```

8.

```
arr = [13,89,45,98,67,45,54]
all_pass = true
for marks in arr:
if marks < 32:
all_pass = false
if all_pass:
print(yes)
else:
print(no)
```

9.

```
arr = [2,4,1,2,3]
count_unique = 0
for num in arr:
if arr.count(num) == 1:
count_unique += 1
print(count_unique)
```

10.

```
arr = [1,4,6,2,7]
min_val = arr[0]
max_val = arr[0]
for num in arr:
if num < min_val:
```

```
min_val = num
if num > max_val:
    max_val = num
print(min_val, max_val)
```
